DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of copending Application No. 10/609,668 in view of Lavy (6,178,933). Each of the limitations of claims 1-5 in the application are shown in claims 1-7 of copending application 10/609,668, except for the limitation of a medium operation mode. It is the view of the examiner that providing an exhaust passage to an adjacent cylinder is common in the art. It is widely known to have the adjacent cylinder's intake to be exhaust, exhaust/air mix, or air. The patent by Lavy specifically shows a cylinder arrangement where the adjacent cylinders can receive a mixture of air and exhaust in a higher load operation, or the fresh air valve can be closed in a low load operation. In view of Lavy, it would have been obvious to one skilled in the art who wanted the higher load operation to

expend less fuel, to improve on application 10/609,668 by providing fresh air to mix into the exhaust intake.
